This mixer is a professional non-powered mixer for studio and live applications. The console features reference-quality microphone pre-amps with a .0007% THD, a pair of direct outputs for recording, a stereo input channel, a dedicated media channel, and an effects send jack with level control.

Additional features include global 48V phantom power, dual selectable control room outputs, built-in stereo compression, an on-board selectable high impedance preamplifier equalized for guitar, 3-band EQ per channel with bypass, signal/clip indicators, and a stereo LED meter bridge. Direct outs on the mic channels allow for connection to most DAW interfaces for recording. Music may also be streamed directly to and from a PC via USB. Direct monitoring can be enabled using the USB to Control Room switch for use with programs such as the included REAPER software. A tablet cradle allows you to hold a smart device for display and convenient operation.
